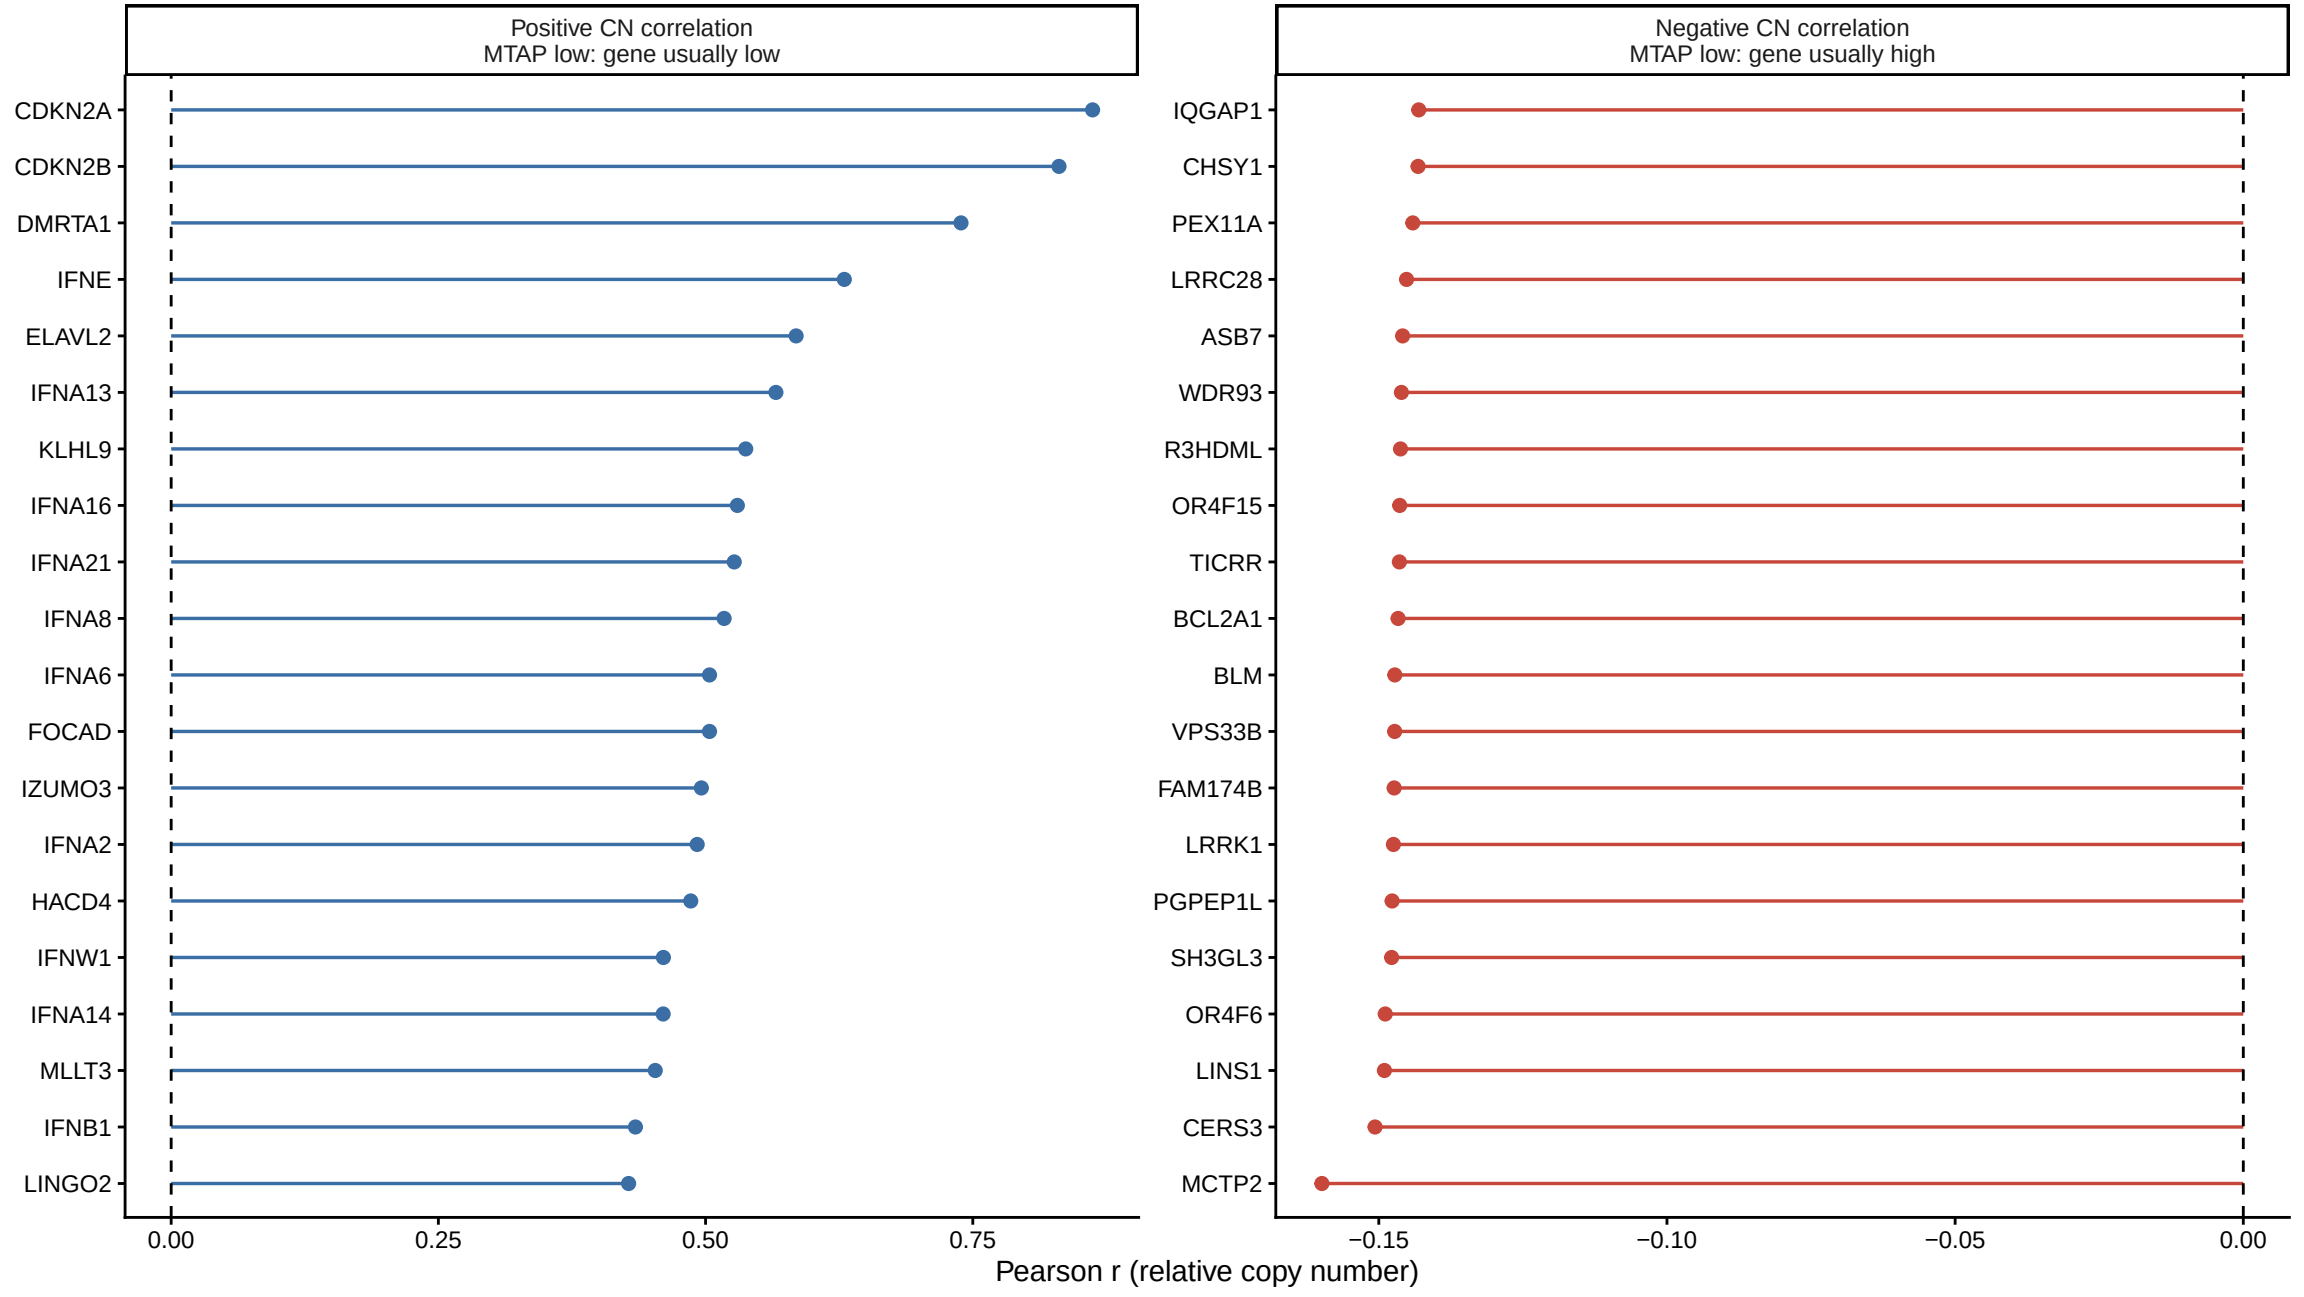
Genes Positively and Negatively Covarying with MTAP Copy Number



Pearson r = linear correlation coefficient between MTAP copy number and each gene's copy number across DepMap cell lines. Top 20 in each direction.
r > 0: same−direction copy−number change; r < 0: opposite−direction change;
|r| closer to 1 indicates stronger correlation; r near 0 indicates weaker linear correlation.
Correlation indicates covariation, not causation.
