

Genes Positively and Negatively Covarying with MYC Copy Number

Pearson r = linear correlation coefficient between MYC copy number and each gene's copy number across DepMap cell lines. Top 20 in each direction.
 $r > 0$: same-direction copy-number change; $r < 0$: opposite-direction change;
 $|r|$ closer to 1 indicates stronger correlation; r near 0 indicates weaker linear correlation.
Correlation indicates covariation, not causation.
